

AMANI GOSU

Python Developer · Custom Software Engineer · Backend Developer · Generative AI Engineer

gosuamani@gmail.com | Hyderabad, India | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Results-driven Computer Science graduate with strong proficiency in Python programming and software development lifecycle (SDLC). Hands-on experience writing clean, maintainable, and efficient Python code with a focus on agile methodologies and collaborative development. Currently building industry experience in Generative AI and LLM-based application development at TalentSmart. Proven ability to design, code, test, and debug scalable backend solutions. Seeking a Custom Software Engineer / Python Developer role at Accenture, Hyderabad to contribute to high-performing, business-specific software solutions.

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript

AI & GenAI: Generative AI, LLMs, Prompt Engineering, NLP

Backend & Databases: REST API Development, MySQL

INTERNSHIP EXPERIENCE

Generative AI Intern | TalentSmart

2026 – Present

- Develop and maintain Python-based AI pipelines to automate text processing, summarization, and intelligent response generation — writing clean, modular, and reusable code.
- Build and fine-tune LLM-powered applications using prompt engineering and modern GenAI frameworks, following agile practices and iterative delivery.
- Collaborate with the engineering team to integrate Generative AI features into production-ready workflows, participating in requirement gathering, design, and code review.
- Explore and implement RAG (Retrieval-Augmented Generation) and vector-based search using Python to enhance AI application accuracy and relevance.
- Apply structured debugging and testing techniques to identify and resolve software defects, ensuring functionality and performance of AI components.

Python Developer Intern | Besant Technologies (Virtual)

Jan – Feb 2024

- Developed 10+ Python applications covering OOP, REST API integration, and data structure challenges — improving code reusability by modularizing shared logic into reusable libraries.
- Reduced average debugging time by applying structured error-handling patterns and unit testing practices across 5+ mini-projects — demonstrating clean, maintainable code practices.
- Built backend logic for REST API consumption tasks, simulating real-world data fetch, parse, and store pipelines using Python.
- Collaborated asynchronously on team mini-projects, delivering well-documented code with clear input/output specifications — aligned with agile and collaborative development workflows.

PROJECTS

Privacy Protection & Intrusion Avoidance — Cloudlet-Based Medical Data Sharing | Academic Project

Tech Stack: Java, Python, MySQL, REST API

- Designed and developed a secure, cloudlet-based medical data sharing platform serving 3 user roles (Admin, Doctor, Patient) — applying clean code and modular architecture principles.
- Implemented encryption for all sensitive medical records at rest, achieving full data confidentiality through robust security coding practices.
- Built RESTful APIs with Spring Boot MVC — independently testable, scalable, and following industry-standard SDLC practices.
- Conducted systematic debugging and testing across all modules, ensuring functionality and performance of each component before integration.

Twitter Trend Mining & Sentiment Analysis System | Academic Project

Tech Stack: Python, NLP

- Built an automated Python data mining pipeline that extracts and processes 5,000+ tweets daily — writing efficient, rate-limit-aware, maintainable code.
- Applied NLP-based sentiment classification to categorize tweet polarity (positive, negative, neutral) across trending topics, demonstrating Python proficiency in real-world data pipelines.
- Preprocessed and cleaned raw tweet datasets in Python — removing noise, stop words, and duplicates — improving model accuracy through structured data handling.
- Visualized sentiment trends and topic frequency to enable data-driven insight reporting and communicate results clearly to stakeholders.

EDUCATION

B.Tech – Computer Science & Engineering | Priyadarshini Institute of Science & Technology for Women

2025 | CGPA: 7.2 / 10

Intermediate (MPC): 83% | SSC: 85%

ADDITIONAL INFORMATION

- Actively building Generative AI expertise — working with LLMs, prompt engineering, RAG pipelines, and AI-powered automation at TalentSmart (Hyderabad, 2026).
- Strong problem-solving foundation in Data Structures & Algorithms, applied consistently through Python projects and internship work.
- Quick learner and self-starter; independently mastered Spring Boot, NLP, and GenAI frameworks through hands-on project-based learning.
- 15 years of full-time education — meets Accenture educational qualification requirement. Based in Hyderabad, available to join immediately.
- Open to roles: Custom Software Engineer, Python Developer, Backend Developer, and Generative AI Engineer.
